Case Study 19: Adventure and Trekking Website

Overview

The Adventure and Trekking website, branded as TrekVista, is designed to help visitors discover trekking routes, camping trips, and outdoor adventure packages. Its visual layout uses nature photography, green colours, and clear navigation to create an outdoor-focused experience.

Key Features

• Popular trek route cards show difficulty levels, locations, distances, and estimated durations.

• Camping trip promotion highlights outdoor activities and guided experiences.

• Trip schedules, equipment checklists, and safety guidelines help visitors prepare.

• Adventure packages display sample durations and prices with booking calls to action.

• Responsive card layouts and navigation make the website easier to use on different screen sizes.

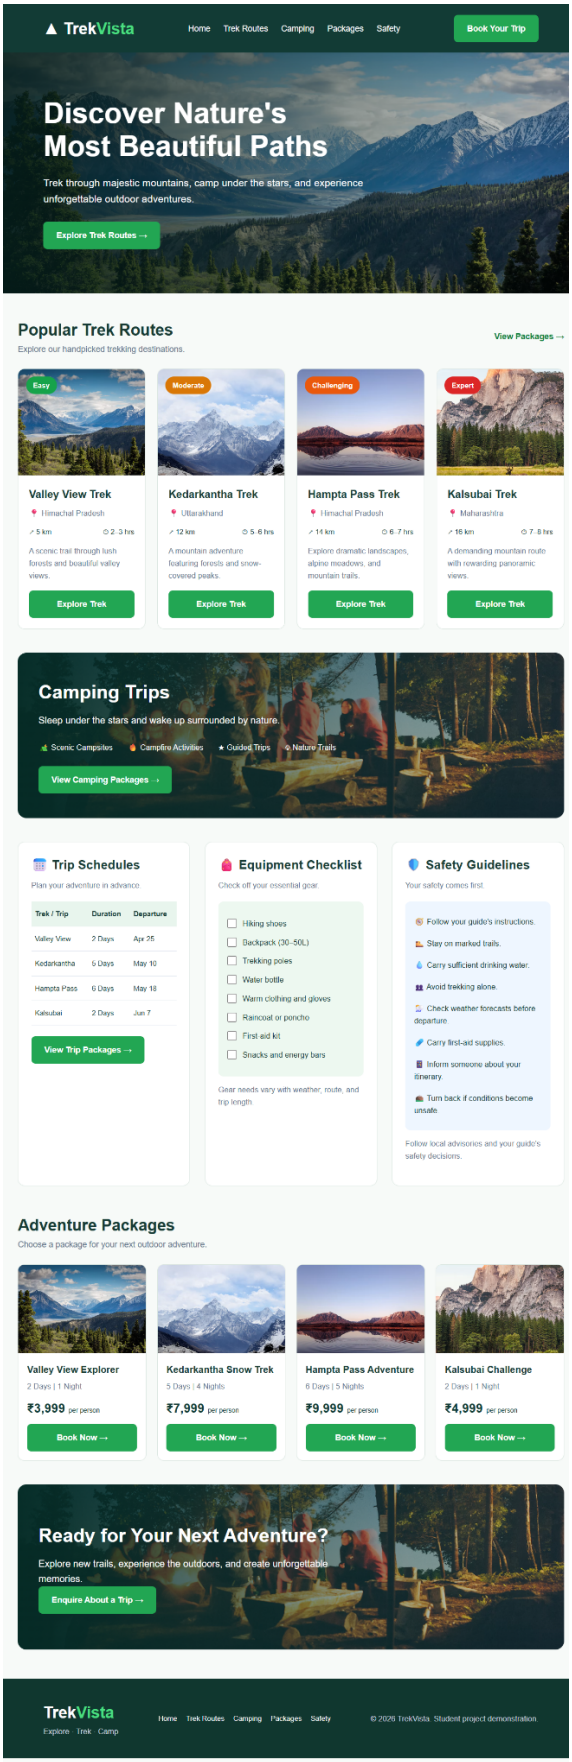

Purpose

The main purpose is to present trekking information in an organised way and help users compare routes and packages before planning a trip. The displayed content is a front-end demonstration; real bookings would require a backend.

Case Study 21: Online News Portal

Overview

The Daily News website is an online news portal concept that organises headlines and article summaries into familiar news categories. A featured-stories area draws attention to major stories, while article cards provide images, summaries, author details, and reading times.

Key Features

• Featured stories and top headlines provide a clear entry point to the news.

• Dedicated sections cover national, international, sports, technology, and business news.

• Article cards include category labels, images, short summaries, and author information.

• A newsletter section demonstrates an email subscription interface.

• CSS Grid and responsive media queries adapt the multicolumn layout to smaller screens.

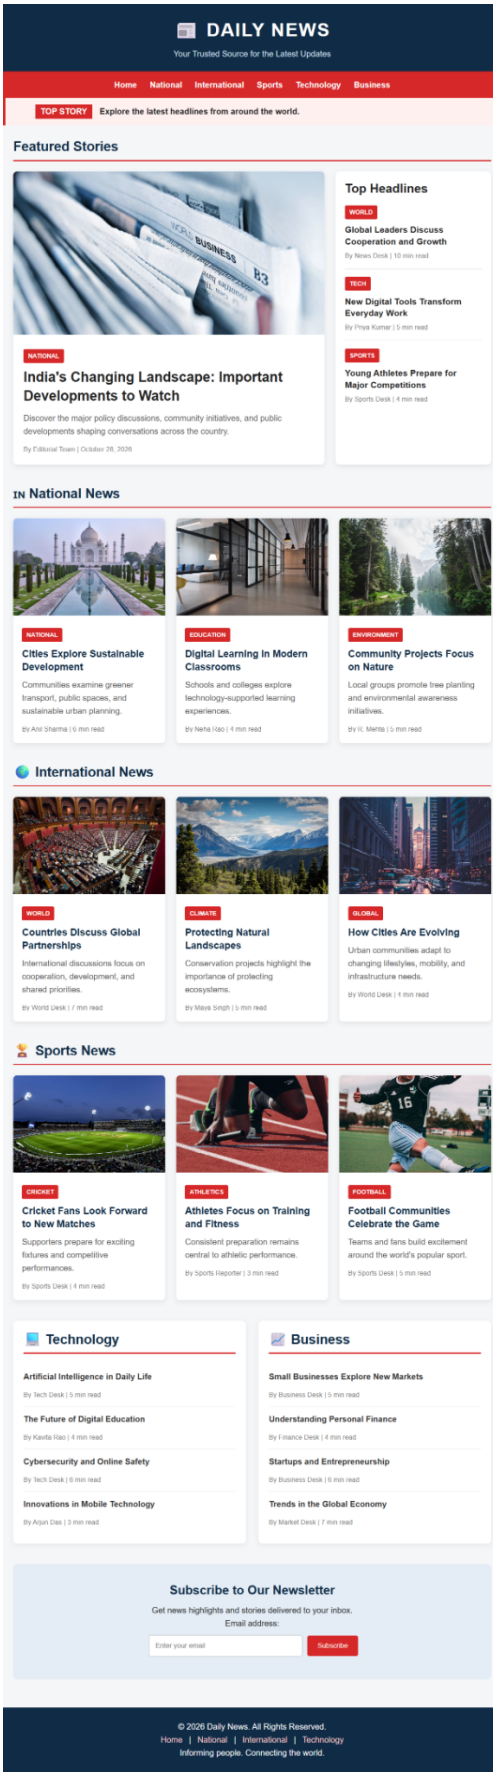

Purpose

The website aims to make news content easy to scan and navigate by topic. The headlines shown are sample project content, not verified live news. Live updates and newsletter subscriptions would require suitable data sources and backend functionality.

Case Study 15: Yoga and Meditation Website

Overview

The Serene Wellness website presents yoga, meditation, and general wellbeing information. Its calming green palette, readable typography, and nature-related imagery are intended to create a peaceful browsing experience.

Key Features

• Yoga pose cards introduce simple practices and describe their general focus.

• Meditation sections explain mindful breathing, guided meditation, and body awareness.

• Instructor profiles introduce sample yoga, meditation, and wellness coaches.

• A weekly schedule displays sample class days, times, and instructors.

• Membership cards, wellness articles, and a contact section organise additional information.

Purpose

The purpose is to provide a single place where visitors can explore wellness practices, review class schedules, and compare membership options. The instructor details, schedule, and prices are examples for the design; real registration and payments would need backend support.
